Novelis’ Changzhou plant is the company’s first aluminum automotive sheet manufacturing facility in China. The wholly owned $100 million plant first began commissioning in 2014 with an estimated annual capacity of 120,000 metric tons. Located in the heart of the Changzhou National Hi-Tech District, the new site is close to vital rail lines, the Changzhou deep water port on the Yangtze River and other world-class business and commercial infrastructure. The new facility will provide customers in China and abroad with high-quality automotive sheet for use in lightweight vehicle structures and body panels such as hoods, doors, fenders and lift gates.
